Subject: Epidemiology-Chlorpyrifos-Transparency
Attachments: kfaa096.pdf; Final ARA 2020 Workshop XI Report .docx

Dear Colleagues

Attached is a paper that proposes an epidemiology council among government agencies. This proposal was presented at the Alliance for Risk Assessment (ARA) workshop in February of 2020 (report attached) and rests in part on data transparency, or lack thereof, when epidemiology data are used to assess individual chemicals. Our publication on chlorpyrifos is referenced, where transparency in a principal epidemiology study is decidedly lacking.

Please feel free to contact the author of this paper, and initiator of this council, Dr. John Doherty, a retired senior EPA employee from the Office of Pesticide Programs. He is copied on this email. Of course, our non-profit group would be more than happy to assist all interested parties in this transparency conundrum.

Cheers!

Michael Dourson
